

PATCHWORK

Keeping Technology Simple

BlackBox *Eco+*

This lightweight waterproof and dust proof compact system allows farmers and contractors to work in different climates and vehicles, and is especially suitable for spreading fertiliser, slurry, spraying, slug pelleting and soil work.

With built in GLONASS and GPS the new BlackBox Eco+ has much greater satellite coverage to map out any location more precisely. With built in Terrain Compensation the Eco+ will correct your position on any slope and undulating land to improve guidance accuracy.

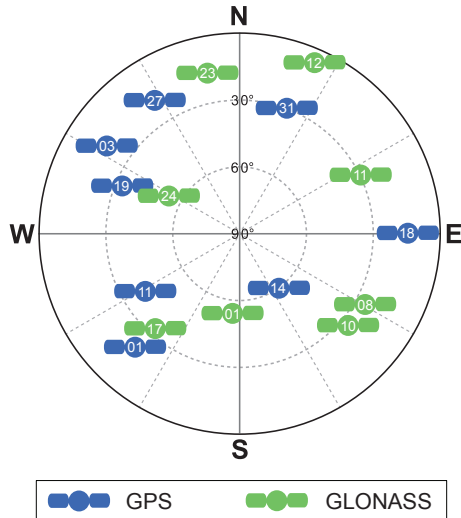

Terrain Compensation is a crucial feature on GPS systems for agriculture since it is fundamental for accuracy. Without Terrain Compensation, the steeper the gradient, the higher the inaccuracy, a slope of just 5 degrees can offset your GPS by 21cm.

Data Sheet

BlackBoxEco⁺

Product Specification

GLONASS Included

GPS and GLONASS constellations together equals :-

- Vastly improved satellite coverage
- Positioning precision increased
- Improved accuracy and reliability

Hardware Features	Guidance and Area Measurement
Bright 7" touch screen	Area Measurement
Built in Terrain Compensation	Auto coverage recording (ACR)
Integrated 10Hz GLONASS and DGPS receiver	Field boundary measurement
Lightweight water and dust proof casing	Field recognition
Operates from 12v vehicle power supply	Pause job
Plug and Play for Immediate Set-Up	Print maps from images on SD Card
USB and SD storage card slots	Straight and Curved 3D Guidance modes
